Here are some of the applications within **energy**, where our solutions help make a difference and get more out of less through innovation, quality and reliability.

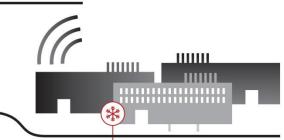

10-15% energy savings from control valves in heating and cooling systems

40% energy savings from variable speed drives controlling fans and pumps

20-30% energy savings with systems and

with systems and components for district heating transfer and the use of hot water in buildings

10-30%

**energy savings** for cooling in data centers with variable speed compressors

**Enable safe electronics**
